Art Unit: 3662

IJ

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, 6-9, 13, and 17-19, drawn to enabling and disabling vehicle control modes, classified in class 342, subclass 61.
- II. Claim 3, drawn to radar apparatus for calculating an RCS value of a moving body, classified in class 342, subclass 70.
- III. Claim 5, drawn to classifying detection performance of a radar system into at least three different levels, classified in class 342, subclass 165.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as calculating an RCS value of a moving body, which is distinct from enabling and disabling vehicle control modes. See MPEP § 806.05(d).

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as classifying detection performance of a radar system into at least three different levels, which is distinct from enabling and disabling vehicle control modes. See MPEP § 806.05(d).

Application/Control Number: 10/083,473

Art Unit: 3662

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as calculating an RCS value of a moving body, which is distinct from classifying detection performance of a radar system into at least three different levels, which can be based on many different calculations. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 3662

Conclusion
